

## Celebrate the Tree!

Planting a tree in your neighborhood is one of the best things you can do not only for your community, but for our planet as well. Make a difference. Plant a tree.

- Trees clean pollutants from the air
- Trees produce oxygen
- Trees conserve energy
- Trees reduce storm water runoff
- Trees add value to communities
- Trees provide food and shelter for wildlife
- Trees create shade and cool the environment

Trees provide a wide range of products (timber, fruit, medicine, beverages, fodder) and services (carbon sequestration, shade, beautification, erosion control, soil fertility). Without trees human life would be unsustainable.

Growing tree plantations to remove carbon dioxide from the atmosphere to mitigate global warming -- so called "carbon sequestration" -- could trigger environmental changes that outweigh some of the benefits.
