

SOME ONE IS WAITING FOR YOU BACK AT HOME

ROLE OF VARIOUS DEPARTMENTS ON SAFETY

CONTRIBUTION TO SAFETY BY OTHER DEPARTMENTS

1. Production Planning

The workplace and processes should be engineered in such a way to achieve the goal of safety. The machines and processes should be so planned, arranged or guarded as to avoid the possibility of injury. The production planning department should not leave the safety of operation to the safety personnel. It is the job of this department which can get help from the safety engineering department to point out the hidden hazards which is not noticed by the department (production department).

2. Maintenance Department

The work of maintenance department is extremely important in the prevention of injuries. The proper maintenance of the machineries such as proper lubrication, alignment and overhauling lead not only to a longer life of machinery and less down time but also to the reduction of injuries.

3. Purchase Department

Purchase department should insist the suppliers that all machines and equipments shall be provided with the necessary guards and other safety features, as required for the indenter.

4. Personal and training department

In many industries the safety officer is part of the personnel and training department. The training department by it self plays a vital role by arranging for faculties and lectures training programmes, seminars etc. related to safety.
