

SOME ONE IS WAITING FOR YOU BACK AT HOME CONSTRUCTION SAFETY

CONSTRUCTION SAFETY

Safe Access On Site

- ❖ Everyone can get to their place of work safely
- ❖ Holes are protected with clearly marked and fixed covers to prevent falls
- ❖ Good lighting and housekeeping

Working at Height

- ❖ Using ladders or scaffolding without proper fixing is crazy
- ❖ Never use incomplete scaffolding.
- ❖ Make sure there are hand rails and toe boards at all edges

Excavation Work.

- ❖ All excavations deeper than 1.25meters MUST be shored or battered.
- ❖ Excavations deeper than 2 meters MUST have a guard rail or barrier
- ❖ Vehicles tipping into the excavation must use stop blocks.

Crane Safety

- ❖ The weight of the load must be carefully estimated
- ❖ The crane must be fitted with an automatic safe load indicator (one that works)
- ❖ The crane must always work on a hard, level base
- ❖ **NEVER, NEVER** be carried with a load

PPE on-site

Most construction sites require at least:

- ❖ Hard hat, Safety Boots and Safety Glasses

Wear them always for your safety.
